Quake Listener

<https://appworld.blackberry.com/webstore/content/51627887/>

the period under review is 09 Mar 2011 – 05 Jul 2016

Quake Listener is an application for BlackBerry 10 that lets you see and search earthquakes in all the world. It uses the public API of USGS (U. S. Geological Survey) to obtain, filter and elaborate data of earthquakes around the world.

Device Model Distribution

SUMMARY

As expected, the device model distribution is almost equal between Keyboard device and Full Touch device. The nature of the functionality of the app doesn't represent a discriminant for the type of the smartphone.

With the latest update are been introduced changes of the User Interface to improve the usability for devices with keyboard and its square display.

App Version Distribution of 2015

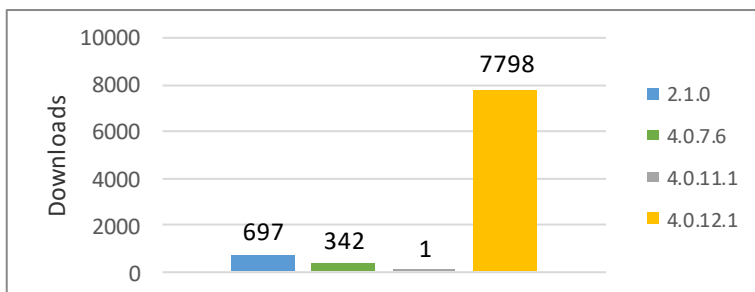

SUMMARY

In 2015 the version 3.0.6.1 isn't the most diffuse. There are also some downloads of the version 2.1.0. This version has a problem to obtain data from USGS server because USGS has changed API format. Only with an update to 3.0.3.3, the app solves this problem.

App Version Distribution of 2016

SUMMARY

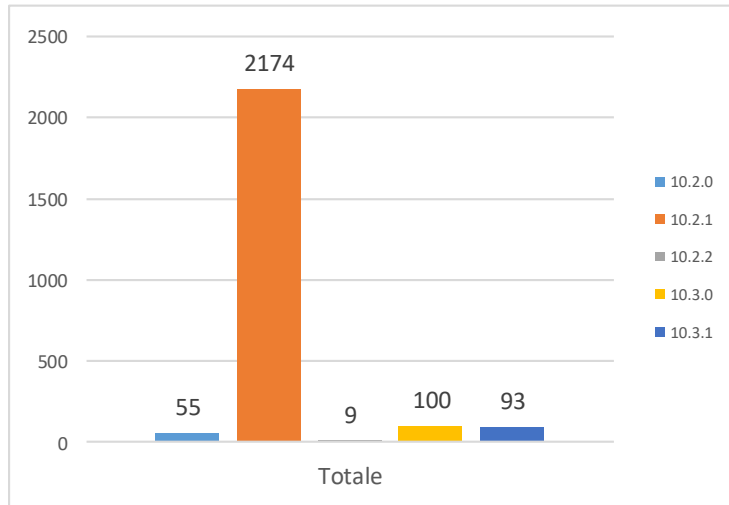

In 2016, fortunately, the version 4.0.12.1 is the most diffuse. This helps to solve the problem quickly.

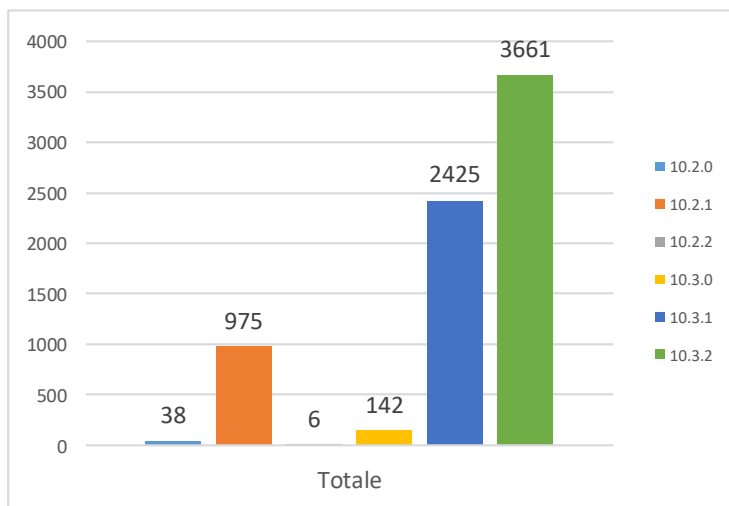

There are still some downloads of the version 2.1.0. This is caused because some carriers have not released the upgrade of the OS 10.3 for their clients.

OS diffusion:
